

The Enterprise Lifecycle-Management-Tool

orcharhino is the lifecycle management tool in the data center based on Foreman/Katello. As a vendor-independent tool, orcharhino is perfectly suited to manage infrastructures in which several different operating systems are used. Administer everything via a unified interface!

Management

Manage hundreds or even thousands of systems with one console as if it were just one system.

Deployment

Create new systems with a button click or API, virtually on bare metal and in the cloud.

Configuration

Automate the configuration of your systems. You can roll out changes, analyze deviations and fix them with a button click.

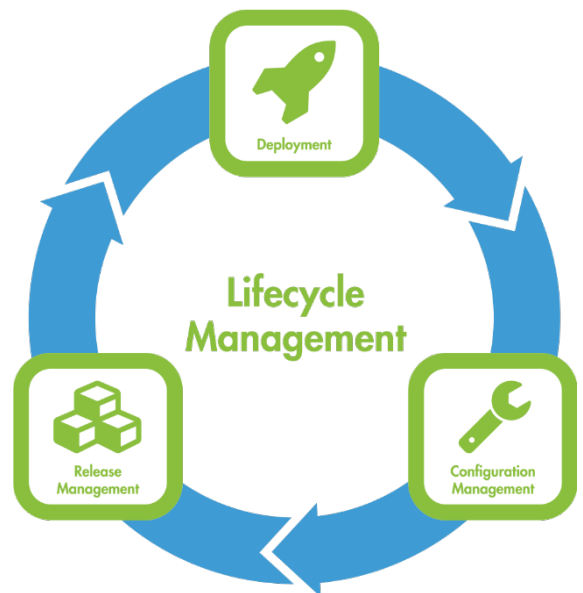

Software Release

Multi-level software management from Dev to Prod. Automate security fixes and updates using Erratas.

Reporting

Keep track of current patch levels as well as system security and track changes.

„An orcharhino-subscription means access to tested releases and updates to connect Linux hosts as well as the support portal!“ - Mark Hlawatschek, CEO ATIX AG

Manage all your systems orcharhino - one Tool to rule them all
